RESEARCH & WORK EXPERIENCE

- **Summer Research Associate**, Center for Computational Neuroscience, Flatiron Institute, Simons Foundation (Summer 2022)
 - Areas of Research: Bio-plausible learning rules for training deep neural networks; Representational Geometry (Supervisor: Dr. SueYeon Chung)
 - Developed a three-factor Hebbian learning rule that operates on non-negative neural networks with a recurrent structure.
 - Both theoretically and empirically showed that the learning rule largely updates weights in the same direction as the loss gradient. Provided exact conditions under which the updates would always be sign-matched with the loss gradient.
 - Analyzed data from the auditory cortex of mice and generated insightful low-dimensional visualizations of their neuronal trajectories, quantified disentanglement between neuronal trajectories and task-relevant separating hyperplanes, found neuronal coordinates that encoded meaningful directions with respect to the experimental task.
- **Graduate Research Assistant**, Georgia Institute of Technology
 - Summer 2021 – Present: Architectural biases in cortical microcircuits and their effects on sequence learning, Predictive coding, Dimensionality of representations in neural networks across learning and brain areas.

- Summer 2018 – Spring 2021: Representation learning, Transfer/Meta and Multi-task learning, Sparse and low-rank representations of data, Models of brain structure and organization.
